

These Barricades are built from heavy gauge steel and are hot-dipped galvanized inside and out for long-term weather resistance. Frames are made from 1.5"/38mm steel tubing, while uprights are made from 1/2"/13mm steel tubing. Uprights are fully inserted into the frame before welding, providing extraordinary strength. Choose from two base systems: a bridge base for uneven surfaces such as grass and a flat base for smooth surfaces such as tarmac and where pedestrian traffic demands the minimum trip hazard. The barricades interlock using the industry standard hook and half-loop fastening system.

► SPECIFICATIONS

Height	43" / 1.1m
Length	6'6" / 2m
Weight	28.5lbs / 13kg
Frame OD	1.5" / 38mm
Upright OD	1/2" / 38mm
Steel	16 gauge / 1.5mm
