

SafetyPro 335 Retraction Lock Instructions

1

Position the stanchions at an appropriate distance in the layout desired.

2

Extend the belts and connect to the next post.

NOTE: Leave 12-18 inches of belt inside the housing to allow for play should the belt be pulled or pushed.

3

Engage the Belt Lock to stop the belt being released accidentally.

4

Engage the Retraction lock.
This is the button on the side
of the housing

The Retraction Lock holds the belt in place preventing it from sagging. The belt will still extend if pulled allowing the play needed should the belt be pushed or pulled.
