

150' / 45m Portable Barrier

Simply wheel the SkyPro into position and then extend the two 75' belts to create a 150' / 45m barrier. Ideal for airport runways and other large-scale venues such as stadiums, arenas, parking lots, warehouses, and factories. The rotating belt housings allow the belts to be deployed in a straight line or at any offset angle. Large, 6" diameter rubber wheels and a low center of gravity allows easy movement by a single person. Almost 130lbs / 59kg of weight centered low down in the base gives SkyPro maximum stability in windy conditions.

SPECIFICATIONS

Height:	41" / 1041mm
Post Diameter:	6" / 152mm
Base Dimensions:	W21"/533mm X L20"/508mm
Wheels:	6"/152mm dia. Rubber
Weight:	129lbs / 58.5kg
