

The Snap Frame Sign Stand is one of the most versatile sign and poster displays available. The adjustable height post and rotating frame make this unit like buying several stands in one! The telescoping stand has a 14" / 0.36m range of adjustability with the highest setting being 45" / 1.14m (to the center of the poster graphic – overall height is taller). The height is adjusted by the push of a button and pulling the post up. The frame can be switched from portrait to landscape by a simple twist and can be changed to any angle between fully vertical and fully horizontal. The snap-open frame provides for simple graphics changes and the aluminum construction with clear PVC poster protectors allows outdoor use.
